

Chances are your electronic detonator supplier uses Alpha-Blast . . . Shouldn't You?

Alpha-Blast Signature Analysis & Seismic Simulation Program V10

If you use electronic detonators, you need this software. The Alpha-Blast program was designed specifically to analyze signature vibrations for the probable effects of various delay times on vibration amplitude and frequency.

Vibration characteristics from the use of specific delay combinations can easily be simulated and changed dynamically. Also, since the Alpha-Blast routines are part of the Seismograph Data Analysis software, the simulations can be analyzed for frequency and other characteristics.

White Industrial Seismology was the first company in the U.S. to develop a commercially available signature analysis program. The Alpha-Blast software has been proven to be effective in the field time and time again.

White Industrial Seismology, Inc.

1206 Schifferdecker ♦ P.O. Box 1256

Joplin, MO 64802-1256

417-624-0164 ♦ 800-641-4538 ♦ FAX: 417-624-9416

The Alpha-Blast software routines require data from a White digital seismograph. It's time to buy from the world leader in blast monitoring seismographs and analysis software.
